

The NASA Applied Remote Sensing Training (ARSET) Program User Engagement and Best Practices

Melanie Follette-Cook

AOS Applications Seminar

November 17, 2022

NASA Applied Remote Sensing Training (ARSET)

https://appliedsciences.nasa.gov/arset

ARSET Training Themes

The ARSET Program delivers costfree training on the use of Earth Observations for decision making

- Our trainings are:
 - Online and in-person
 - Live, instructor-led, or self-guided
 - Provided at no cost, with materials and recordings available from our website
 - Often multi-lingual
 - Range in level from introductory to advanced

ARSET Trainings 2009 - 2022

ARSET Team Members

Melanie Follette-Cook Project Scientist, Instructor

Brock Blevins Training Coordinator

David Barbato Spanish Translator

Annelise Carleton-Hug Program Evaluator

Sarah Cutshall Associate Outreach Coordinator

Natasha Johnson-Griffin **Training Coordinator**

Selwyn Hudson-Odoi Training Coordinator

Marines Martins Project Support

Jonathan O'Brien Technical Writer/Editor

Sean McCartney Instructor

Lead Instructor

Erika Podest Lead Instructor

Instructor

Amber McCullum Lead Instructor

Juan Torres-Pérez **Britnay Beaudry** Instructor

Pawan Gupta Lead Instructor

Sarah Strode Instructor

NASA's Applied Remote Sensing Training Program

ARSET trainings serve a diverse set of communities...

 ARSET trainings are intended for policymakers, NGOs, and other applied science professionals looking to incorporate NASA remote sensing into their daily,

operational activities.

- ARSET also trains the next generation of Earth scientists.
 - Academia (both faculty and students) routinely make up 40-60% of training attendees.

NASA's Applied Remote Sensing Training Program

Across multiple continents

- 80% of attendance is international
- Highest participation outside US is India, Colombia, and Mexico

ARSET continues to grow and reach new communities each year.

Participation by Year

Unique Organizations

Sample 2022 ARSET Trainings

<u>Selecting Climate Change</u> <u>Projection Sets for Mitigation,</u> <u>Adaptation, and Risk</u> <u>Management Applications</u>

<u>Disaster Assessment Using</u> <u>Synthetic Aperture Radar</u> <u>En Español</u>

Applications of Remote Sensing-Based Evapotranspiration Data Products for Agricultural and Water Resource Management

Accessing and Analyzing Air Quality Data from Geostationary Satellites

iram

Evaluating Ecosystem Services with Remote Sensing

Mapping Crops and their Biophysical Characteristics with Polarimetric SAR and Optical Remote Sensing En Español

Why training?

- Accelerate use of data from awareness, appreciation, appetite, through adoption
- Improve utility of data products and tools for users
- Communicate appropriate
 uses of data products
- Increasing use of data in user communities enables more informed decisions

Building an Effective Training

- 1. Assess End-User Needs
- 2. Define and design the training
- 3. Training Promotion
- 4. Develop Training Material
- 5. Conduct the Training
- 6. Evaluate the Training

Assess End-User Needs

For a training to be effective, trainers need to understand the needs of participants

Survey responses

Interviews

EARTH SCIENCE APPLIED SCIENCES NASA-developed resources and tools

Conferences and Meetings

NASA's Applied Remote Sensing Training Program

Define and Design the Training

- 1. Define training motivation and learning objectives
 - Purpose: What knowledge/skills will be gained?
 - Audience: Who the training will target
 - Impact: Value/Use of the training by the audience

- 2. Design and outline training
 - Determine training level (e.g., introductory vs. advanced)
 - Assess need for additional subject matter expertise
 - Consider offering at least two sessions to capture multiple time zones
 - Consider number and length of parts
 - Investigate potential case studies

Training Promotion

Identify appropriate organizations, sectors, or regions for participation in your training activity

ARSET promotes trainings to the following:

- Applied science professionals and decision-makers
- Organizations with demonstrated
 environmental need
- Previously unreached organizations
- A sector or geographic region with low engagement
- Organizations with potential for future collaboration
- Stakeholders with unique knowledge of their community's decision support system

Promotion through

- Listserv
- Existing portals, groups
- Networking
- Social Media

Develop Training Material

Lectures

What are Ecosystem Services?

- Ecosystem services are the benefits people obtain from ecosystems.
- There is a wide range of conditions and processes through which natural ecosystems, and the species that are part of them, help sustain and fulfill human life.

Evaluating Ecosystem Services with Remote Sensing August 23 - 30, 2022

Questions & Answers Part 1

Please type your questions in the Question Box. We will try our best to <u>get to</u> all your questions. If we don't, feel free to email Amber McCullum (<u>amberjean.mccullum@nasa.gov</u>) or Juan Torres-Pérez (<u>juan.l.torresperez@nasa.gov</u>).

Question 1: What are the parameters to be used in assessing the Economic Ecosystem Service Valuation of a freshwater wetland? Answer 1: The variables you use will depend on your local study area and desired outcomes. Some that may be of interest are wetland extent and change, which can be

you -RSET Training Team

Training Evaluation

Training evaluation is important for assessing success in meeting learning objectives, assessing training impact, and identifying future training topics and other areas for improvement.

Exit Survey

- Gather immediate impressions
- Determine if learning objectives were met
- Gather future training topics

Post Training Survey

- Sent one year after training
- Assess changes in use of remote sensing observations and tools
- Identify barriers to adoption

Interviews

 Gain deeper insights into training benefits

Advice for AOS

- Consider using training to develop capacity in your user communities.
- Begin with user needs first and work from there.
- Accommodate different experience levels of future data users.
- Invest in making your products analysis-ready (e.g., provide readers or code to cut down on initial processing).

Thank you!

WMO-CGMS Virtual Laboratory for Education and Training in Satellite Meteorology (VLab): Who are we and what do we do?

Bernie Connell (CIRA, USA) and Wen Bo (CMA TC, China) VLab Co-Chairs Zoya Andreeva, WMO Marcial Garbanzo, UCR, Costa Rica (TSO)

WMO OMM

World Meteorological Organization Organisation météorologique mondiale

WMO-CGMS VLab - established in 2000

The Virtual Laboratory for Training and Education in Satellite Meteorology (VLab)

CMA, CONAE, EUMETSAT, INPE, JMA, KMA, NOAA, ROSHYDROMET, IRSO

Centres of Excellence

Costa Rica, Barbados, Brazil, Argentina, Morocco, Niger, Oman, Kenya, South Africa, Russian Federation, Republic of Korea, China, Australia

Candidate as a New Centre of Excellence : BMKG Indonesia

Our Mission

To improve weather, water, climate and environmental services by enabling WMO Members to utilize satellite data.

What we do:

We provide training that promotes the interdisciplinary application of satellite data for user services.

We share knowledge, experience, methods, and tools related to access and usage of satellite data, especially in support of WMO Members that have limited resources.

Our audience:

Mainly operational meteorologists: those performing the duties of analysis, diagnosis, prognosis and forecasting of the weather.

...and includes students, researchers, trainers, managers, and others spanning related disciplines that use weather and climate information

Review of additional skills:

- Skill 8: Apply satellite-based climate data records for **Meteorological Services**
- Skill 9: Apply satellite-based • products for Agricultural monitoring

https://library.wmo.int/index.php?lvl=notice_display&id=19843

Coordination Group for Meteorological Satellites (CGMS) and World Meteorological Organization (WMO)

How do we implement competency-based training?

1. Include Satellite Skills in the training plan

- Identify the skills that will be addressed
- State the skills in the course description
- Add the skills to the back of the certificates

2. Link the training to the existing WMO competency framework

- In Calendar announcements
- In the Library of training resources

Overview of Training: December 2020 through November 2021

- > A total of **126** training events were organized by VLab partners in 2021.
- > About 4,250 learners participated from all WMO Regional Associations (RA).
- > Training offered in 7 languages; some events were bilingual.

Continuous Professional Development

1. Promote initiatives

- **CoE** Courses
- Themed events
- Internships
- **Regional Workshops**
- Hackathons
- **Regional Focus Groups**

2. Train the Trainers and **Gather Input and Feedback**

- Offer regional training of trainers
- **User Conferences & Surveys**
- Adopt WMO Education & Training guidelines

3. Global Campus Sharing of

- Training materials
- Instructional innovations
- Assessment methods

Challenges

- Maintaining up to date knowledge and skills of operational personnel and trainers;
- Raising awareness of developments in satellite meteorology.

Approaches

- Work closely with subject matter expertise;
- Foster communities of practice;
- Encourage sharing of training resources.

WMO Regions

What is a Focus Group?

A long term Community of Practice that brings together diverse stakeholders Informal learning (no participation certificates are offered)

Synoptic Overview

O OMM

Make the information stick with blended learning approaches

Collaborations = Successes

- Increased Country, Organizations, and Individual Participation = Community of Practice
- Colleagues and Previous Participants as Facilitators and Instructors of sessions.
- Students and early career professionals have moved into forecaster, instructor/trainer, researchers, manager, and senior professional roles.
- Promotion of:
 - Peer to peer interaction
 - Communication across boundaries
 - Continuing Professional Development
 - Interdisciplinary Linkages

Community for the **A**dvancement of **L**earning in **Met**eorology *and* related disciplines

- > The CALMet XIV Conference: "Bringing Together the Best of Online to Learning"
- Host: Servicio Meteorológico Nacional, Argentina (VLab CoE)
- ➢ 56 contributors from all Regional Associations of WMO.
- 260 educators, trainers and managers from universities, research institutions, and National Meteorological and Hydrological Service registered for the event.

Examples of small things that make a big difference to enhance engagement.

- Make sure the providers put color bars and units on products!
- Use level 0, 1, 2 etc. to describe product, not 'catchy' nicknames
- If you provide information, think simple language:
 - It is easier to understand and pass on to users.
 - It can be translated to other languages more readily.
- Provide reasonable information on Imagery/Product latency.
- Rain rate vs accumulation confusion.
- Join in a workshop or RFG session to see how they operate. If applicable, volunteer to present, particularly for languages other than English.

Thank You!
